Organized crime is increasingly attacking the German economy

- 206 billion euros in damage per year due to data theft, espionage and sabotage
- Most attacks come from Russia and China
- Every second company feels their existence is threatened by cyber attacks

Andreas Streim

Berlin, September 1, 2023 - The German economy suffers 206 billion euros in damage every year due to

Russland und China sind wichtigste Basis für Angriffe
Konnten Sie feststellen, von wo aus bzw. aus welcher Region diese Handlungen vorgenommen wurden?

Spending on IT security in Germany until 2025

Published by [Statista Research Department](#) , March 5, 2024

In 2022, around 7.8 billion euros will be spent on IT security in Germany. According to the source, spending in 2025 will amount to around 10.3 billion euros.

Cybercrime: the most underestimated danger of the future

July 6, 2023

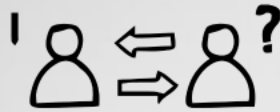

Why companies shouldn't waste any time protecting themselves against this

In the digital age, cybercrime has become one of the most lucrative and fastest-growing areas of all. Attacks on companies and states by cybercriminals are increasing massively worldwide from year to year. A further boost came when many employees went to work from home: cybercriminals found their way into people's living rooms almost unmolested - and thus also into companies around the world. The two cyber security experts, Thomas Stubbings, CEO of CTS Cyber Trust Services, and Richard Knowlton, former security director of the Vodafone Group, analyze why companies should not waste any time in massively upgrading in this area and what cyber dangers will lie in wait for us in the future and Director of Security Studies at the Oxford Cyber Academy.

STEP 1

Security Review Process

Complete IT security check

Secure your websites and servers from criminals

Our employees have over 20 years of experience in IT security. In addition, we use an AI programmed by our IT specialists to automatically check your servers for vulnerabilities.

Order a security check now

We do not require any access data and do not use malware such as viruses or Trojans. We scan your IT systems without compromising them. You will then receive a detailed report on all gaps found and suggestions on how to rectify them.

STEP 2

Use of advanced Tools and Technologies

SourceWeb IT-Security

SourceWeb International AG

27 Old Gloucester Street
WC1N 3AX London
United Kingdom

Checked on: 18-Jan-2024

Valid until: 17-Jul-2024

Compliance:

✓ **SW_SEC_V2.17**

✓ **PCI:DSS Level 1**

✓ **ISO/IEC 27001**

The website **cybersecure.sourceweb.com** has been checked according to the following security standards:

✓ **SW_SEC_V2.17**

Our standard covers all security vulnerabilities that could jeopardize the data sent to the server.

✓ **PCI DSS**

The systems were checked in accordance with the PCI:DSS standards and the PCI:DSS ASV scan was passed. Credit card data can be securely transmitted to and processed by the server.

✓ **ISO/IEC 27001**

The company and its IT infrastructure meet the ISO/IEC 27001 standards.

Scanned systems:

- cyberprotect.sourceweb.com
- 92.205.230.169

This seal of approval confirms that the aforementioned IT systems have been checked by SourceWeb CyberProtect in accordance with the aforementioned security standards. No security-relevant vulnerabilities were found. The IT systems are optimally protected against criminal attacks.

A level 1 organization spends between \$50,000 to \$200,000 annually setting up the PCI compliance requirements and maintaining those systems.

CUSTOMER REFERENCE

Using **SourceWeb** with Contentful

At Vodafone we use an inner-sourced global design system, SourceWeb, to build and deliver highly consistent and scalable digital experiences. We contribute and consume SourceWeb (and other libraries!), across all our web engineering teams. This enables us to reduce frustrating blockers, reimplement components with ease, and improve the developer experience by having expertise from the entire engineering team.

Within our Contentful integration, we have leveraged the content modelling capabilities to incorporate this into the build so content editors update directly into SourceWeb components. When the field is updated in Contentful - be that with simple text, rich text, or any other configured data type - the new content is seamlessly passed into the corresponding SourceWeb component we have mapped for it. This simplifies our content management process and ensures that our digital experiences are aligned, in design, usability, and accessibility standards.

This is especially useful when updating static marketing pages and allows us to build, update, and delete at speed.

07.07.2016

The French Ministry of Information and Communication Technology commissions SourceWeb

SourceWeb receives a project order for a total amount of 15 million euros from the French Ministry.

The French Prime Minister sees in the project with SourceWeb a "real opportunity" to support the operational management of the Ministry of Defense through the technical development of certain mechanisms. Therefore, on July 07, the French Prime Minister gave his approval to the implementation of the project with SourceWeb.

The project has a total value of 15 million euros (including internal costs within the ministries).

You can access the full document of the French Prime Minister here:
